

NEW AIR PURIFICATION PROJECT

The parish has committed over \$150,000 to install needlepoint bi-polar ionization in all spaces used for extended periods. Filtration will cover all school classrooms, the school office, North Hall, and the parish office.

The project includes approximately \$60,000 for devices installed inside the room unit ventilators (preferred option), and high-level portable units in the remaining spaces. Many unit ventilators are not functional and replacing them costs over \$700,000. At this time, the first phase of the replacements will occur. Unit ventilators will be replaced in five classrooms at a cost of approximately \$90,000. Some other unit ventilators can be temporarily activated with replaced motors and other parts.

The remaining non-functional unit ventilators will be replaced in phases over the next number of years. This is dependent on your ongoing stewardship pledges to create funds available for this project through the parish budget. When future unit ventilators are replaced, the preferred in-unit filtration devices will be installed. The portable units will then be repurposed to other areas of the parish.

Funds for this unplanned project come from three sources. Most significantly, the ongoing "Living the Call, Sharing God's Gifts" Capital Appeal. The boiler was installed under budget, leaving funds available. Secondly, an anonymous special gift was given to start this project. Thirdly, another donation may help replenish the capital appeal allocation used for the project. Thank you to all appeal donors and the special donors who helped. Additional thanks are due to a subcommittee of the COVID Task Force for initial conversations on this project and the parish Finance Council who thoughtfully created a path forward.

The work is being completed by Automated Energy Solutions, Inc. owned by a parish school alum.

You may participate in the ongoing Capital Appeal here:
christkingparish.org/capitalappeal.cfm.

Your regular parish stewardship commitment can be facilitated here:
christkingparish.org/pledge.cfm

Please spread the word on the good work occurring in our parish school, which will soon contain state-of-the-art air purification systems to address issues related to COVID, as well as other airborne contaminants.

See you at Mass,
Fr. Phillip
